# lsnes Lua functions reference

## December 29, 2013

# 1 Table of contents

# Contents

2 Special tokens 2.1 @@LUA_SCRIPT_FILENAME@@	
3.1 print: Print values to console 3.2 tostringx: Format a value to string 3.3 exec: Execute Isnes commands 3.4 utime: Get current time 3.5 emulator_ready: Check if emulator has been fully initialized 3.6 set_idle_timeout: Run function after timeout when emulator is idle 3.7 set_timer_timeout: Run function after timeout.	
3.1 print: Print values to console 3.2 tostringx: Format a value to string 3.3 exec: Execute Isnes commands 3.4 utime: Get current time 3.5 emulator_ready: Check if emulator has been fully initialized 3.6 set_idle_timeout: Run function after timeout when emulator is idle 3.7 set_timer_timeout: Run function after timeout.	
3.2 tostringx: Format a value to string	
3.3 exec: Execute Isnes commands 3.4 utime: Get current time 3.5 emulator_ready: Check if emulator has been fully initialized 3.6 set_idle_timeout: Run function after timeout when emulator is idle 3.7 set_timer_timeout: Run function after timeout.	
3.4 utime: Get current time	
3.5 emulator_ready: Check if emulator has been fully initialized	
3.6 set_idle_timeout: Run function after timeout when emulator is idle	
3.7 set_timer_timeout: Run function after timeout	
olo bus_uadress: Book up address in system bus; i i i i i i i i i i i i i i i i i i i	
3.9 loopwrapper: Convert loop into callable function	
3.10 list_bindings: List keybindings	
3.11 get_alias: Get expansion of alias	
3.12 set_alias: Set expansion of alias	
3.13 create_ibind: Create invese binding	
3.14 create command: Create a command	
3.15 loadfile: Load Lua script	
3.16 dofile: Execute Lua script	
3.17 open_file: Open a stream	
3.18 FILEREADER(): Read line/bytes from stream	
3.19 FILEREADER: Iterator to read all lines	
3.20 resolve filename: Resolve name of file relative to another	
3.21 render queue function: Return paint function for render queue	
5.21 Tender_queue_runction. Iteauri paint function for fender queue	
4 Table bit:	
4.1 bit.none/bit.bnot: Bitwise none or NOT function	
4.2 bit.any/bit.bor: Bitwise any or OR function	
4.3 bit.all/bit.band: Bitwise all or AND function	
4.4 bit.parity/bit.bxor: Bitwise parity or XOR function	
4.5 bit.lrotate: Rotate a number left	
4.6 bit.rrotate: Rotate a number right	
4.7 bit.lshift: Shift a number left	
4.8 bit.lrshift: Shift a number right (logical)	
4.9 bit.arshift: Shift a number right (arithmetic)	
4.10 bit.extract: Extract/shuffle bits from number	
4.11 bit.value: Construct number with specified bits set	
4.12 bit.test any: Test if any bit is set	
4.13 bit.test all: Test if all bits are set	
4.14 bit.popcount: Population count	
4.15 bit.clshift: Chained left shift	
4.16 bit.crshift: Chained right shift	
4.17 bit.flagdecode: Decode bitfield into flags	1

	4.18	bit.rflagdecode: Decode bitfield into flags
5	Tab	le gui:
_	5.1	gui.resolution: Get current resolution
	$5.1 \\ 5.2$	gui.left gap/gui.right gap/gui.top gap/gui.bottom gap: Set edge gaps
	5.2	gui.delta_left_gap/gui.delta_right_gap/gui.delta_top_gap/gui.delta_bottom_gap: Adjust edge gaps
	5.4	gui.detta_lett_gap/gui.detta_right_gap/gui.detta_top_gap/gui.detta_bottom_gap: Adjust edge gaps gui.text/gui.textH/gui.textHV; Draw text
	5.5	gui.rectangle: Draw a rectangle
	5.6	gui.box: Draw a 3D-effect box
	5.7	gui.pixel: Draw a single pixel
	5.8	gui.crosshair: Draw a crosshair
	5.9	gui.line: Draw a line
	5.10	gui.circle: Draw a (filled) circle
		$gui.bitmap\_draw/(D)BITMAP:draw:\ Draw\ a\ bitmap  .\ .\ .\ .\ .\ .$
	5.12	gui.palette_new: Create a new palette
		gui.bitmap new: Create a new bitmap
	5.14	gui.bitmap load/gui.bitmap load str: Load a bitmap from file or string
		gui.bitmap load png/gui.bitmap load png str: Load a bitmap from PNG
		gui.bitmap load pal/gui.bitmap load pal str: Load a palette
		gui.palette_set/PALETTE:set: Set palette entry
	5.18	gui.bitmap_pset/(D)BITMAP:pset: Set pixel in bitmap
	5.10	gui.bitmap_pget/(D)BITMAP:pget: Get pixel in bitmap
	5.19	gui.bitmap_size/(D)BITMAP:size: Get size of bitmap
	ნ.⊿∪ წე1	gui.bitmap blit/(D)BITMAP:blit: Blit a bitmap into another
		gui repaint: Arrange a repaint
		gui.synchronous_repaint/RENDERQUEUE:synchronous_repaint: Paint screen now
		gui.subframe_update: Enable/Disable subframe updates
	5.25	gui.screenshot: Write a screenshot
	5.26	gui.screenshot_bitmap: Write a screenshot to bitmap
		gui.color: Compose a color.
	5.28	gui.status: Set status variable
	5.29	gui.rainbow: Rainbow color calculation
		gui.renderq_new: Create a render queue
		gui.renderq_clear/RENDERQUEUE:clear: Clear a render queue
		gui.renderq set/RENDERQUEUE:set: Change active render queue
		gui.renderq run/RENDERQUEUE:run: Run render queue
		RENDERQUEUE:render: Render a queue to DBITMAP
		gui.loadfont: Load a font file
		CUSTOMFONT(): Render text to screen
		gui.adjust_transparency/DBITMAP:adjust_transparency/PALETTE:adjust_transparency: Adjust trans
	0.01	parency of DBITMAP or PALETTE
	E 20	
		gui.kill_frame: Kill video frame and associated sound
		gui.arrow: Draw an arrow
		gui.tilemap: Create a tilemap
		TILEMAP:getsize: Query tilemap size
		TILEMAP:getcsize: Query tilemap cell size
		TILEMAP:get: Query tilemap cell
		TILEMAP:set: Set tilemap cell
	5.45	TILEMAP:scroll: Scroll tilemap
	5.46	TILEMAP:draw: Draw tilemap
	5.47	gui.bitmap_save_png/(D)BITMAP:save_png: Save a bitmap to PNG
		gui.bitmap hash/(D)BITMAP:hash: Hash a bitmap
		gui.palette hash/PALETTE:hash: Hash a palette

17.1 bsnes.dump sprite: Dump a sprite	
17.2 bsnes.dump_palette: Dump a palette	
18 Table _SYSTEM	
19 Callbacks	
19.1 on paint: Screen is being painted	
19.2 on video: Dumped video frame is being painted	
19.3 on frame emulated: Frame emulation complete	
19.4 on frame: Frame emulation starting	
19.5 on startup: Emulator startup complete	
19.6 on_rewind: Movie rewound to beginning	
19.7 on_pre_load: Load operation is about to start	
19.8 on_err_Load: Load failed	
19.9 on_post_load: Load completed	
19.10on_pre_save: Save operation is about to start	
19.11on_err_save: Save failed	
19.12on post save: Save completed	
19.13on quit: Emulator is shutting down	
19.14on input: Polling for input	
19.15on_reset: System has been reset	
19.16on readwrite: Entered readwrite mode	
19.17on snoop/on snoop2: Snoop core controller reads	
19.18on_keyhook: Hooked key/axis has been moved	
19.19on_idle: Idle event	
19.20on timer: Timer event	
19.21on set rewind: Rewind point has been set	
19.22on_pre_rewind: Rewind is about to occur	
19.23on_post_rewind: Rewind has occured	
19.24on_button: Button has been pressed	
19.25on_movie_lost: Movie data is about to be lost	
19.26on_latch: Latch line is rising	
20 System-dependent behaviour	
20.1 bsnes core	
20.2 gambatte core	

## 2 Special tokens

These tokens are special, and are expanded while the script is being loaded

## 2.1 @@LUA SCRIPT FILENAME@@

Expanded to string token containing path and filename of this Lua script. Handy for referencing other lua scripts or resources that are relative to this Lua script.

In practicular, this is suitable to be passed as base argument of various functions like loadfile, dofile, resolve\_filename, gui.bitmap\_load\_png and gui.bitmap\_load\_pal.

#### 3 Global

#### 3.1 print: Print values to console

• Syntax: none print(value... values)

Prints specified values to console. Can print any Lua type at least enough to identify the type and instance.

#### 3.2 tostringx: Format a value to string

• Syntax: string tostringx(value val)

Formats value <val> like print would, and returns the result as a string.

#### 3.3 exec: Execute Isnes commands

• Syntax: none exec(string cmd)

Execute Isnes command < cmd>.

#### 3.4 utime: Get current time

• Syntax: (number,number) utime()

Returns two numbers. First is time since some epoch in seconds, the second is microseconds mod 10<sup>6</sup> since that epoch.

## 3.5 emulator ready: Check if emulator has been fully initialized

• Syntax: boolean emulator ready()

Returns true if emulator has finished booting, false if not (on startup() will be issued later).

#### 3.6 set idle timeout: Run function after timeout when emulator is idle

• Syntax: none set idle timeout(number timeout)

Set number of microseconds to block idle for. After this timeout has expired, on idle() will be called once.

#### 3.7 set timer timeout: Run function after timeout.

• Syntax: none set timer timeout(number timeout)

Set number of microseconds to block timer for. After this timeout has expired, on timer() will be called once.

#### 3.8 bus address: Look up address in system bus.

• Syntax: none bus\_address(number bus\_addr)

Returns virtual address corresponding to specified address on system bus.

#### 3.9 loopwrapper: Convert loop into callable function

• Syntax: function loopwrapper(function fun, ...)

Calls function <fun> with function and specified arguments. The function passed suspends execution until the function returned is called. Handy for linear flow control among multiple invocations of a hook. Example code:

## 3.10 list bindings: List keybindings

• Syntax: table list bindings([string cmd])

Get table of all keybindings, indexed by keyspec (modifiers mask/key). If <cmd> is specified, the table is limited to that command. Also searches for controller keys.

#### 3.11 get alias: Get expansion of alias

• Syntax: string get\_alias(string aname)

Get expansion of given alias <aname>.

## 3.12 set alias: Set expansion of alias

• Syntax: none set\_alias(string aname, string value)

Set expansion of given alias.

## 3.13 create ibind: Create invese binding

• Syntax: INVERSEBIND create\_ibind(string name, string cmd)

Return object representing inverse binding with specified name < name> and specified command < cmd>.

- Note: To create press/release commands, use aliases +foo and -foo .
- Note: Keep the returned object around.

#### 3.14 create command: Create a command

- Syntax: COMMANDBIND create communad(string name, function a)
- Syntax: COMMANDBIND create commmand(string name, function a, function b)

Return object representing a command (pair).

- If only one function is specied, the command is level-sensitive, <a> is callback.
- If <b> is function, the function is edge-sensitive, <a> is positive edge callback and <b> is negative edge callback.
- All callbacks get single argument: The parameters passed.
- Keep the returned object around.

#### 3.15 loadfile: Load Lua script

• Syntax: function loadfile(string filename[, string base])

Load lua script from <filename>, resolved relative to <base> (if empty, current directory).

#### 3.16 dofile: Execute Lua script

• Syntax: function dofile(string filename[, string base])

Execute lua script from <filename>, resolved relative to <base> (if empty, current directory) and return all return values.

## 3.17 open file: Open a stream

• Syntax: FILEREADER open\_file(string filename[, string base])

Open file <filename>, resolved relative to <base> (if empty, current directory) and return a handle.

## 3.18 FILEREADER(): Read line/bytes from stream

- Syntax: string/nil FILEREADER()
- Syntax: string/nil FILEREADER(number bytes)

Reads next line or <br/>bytes> bytes from specified file handle. On EOF, nil is returned.

• Note: The line-oriented variant reads in text mode, so CR at end of line is stripped.

#### 3.19 FILEREADER: lines: Iterator to read all lines

• Syntax: for line in <foo>:lines() do ... end

Iterator for reading all lines of <foo> in a loop.

## 3.20 resolve filename: Resolve name of file relative to another

• Syntax: string resolve file(string filename, string base)

Resolve name of file <filename> relative to <base> and return the result.

## 3.21 render queue function: Return paint function for render queue

• Syntax: function render\_queue\_function(RENDERQUEUE rq)

Return function that renders render queue <rq>.

• Handy for paint callback if one is using render queues updated in other callbacks. As in:

handle = callback.paint:register(render\_queue\_function(my\_rq));

#### 4 Table bit:

Bitwise logical functions and related.

## 4.1 bit.none/bit.bnot: Bitwise none or NOT function

- Syntax: number bit.none(number...)
- Syntax: number bit.bnot(number...)

48-bit bitwise NOT / NONE function (set bits that are set in none of the arguments).

## 4.2 bit.any/bit.bor: Bitwise any or OR function

- Syntax: number bit.any(number...)
- Syntax: number bit.bor(number...)

48-bit bitwise OR / ANY function (set bits that are set in any of the arguments).

#### 4.3 bit.all/bit.band: Bitwise all or AND function

- Syntax: number bit.all(number...)
- Syntax: number bit.band(number...)

48-bit bitwise AND / ALL function (set bits that are set in all of the arguments).

## 4.4 bit.parity/bit.bxor: Bitwise parity or XOR function

- Syntax: number bit.parity(number...)
- Syntax: number bit.bxor(number...)

48-bit bitwise XOR / PARITY function (set bits that are set in odd number of the arguments).

#### 4.5 bit.lrotate: Rotate a number left

• Syntax: number bit.lrotate(number base[, number amount[, number bits]])

Rotate <bits>-bit (max 48, default 48) number <br/>base> left by <amount> (default 1) places.

#### 4.6 bit.rrotate: Rotate a number right

• Syntax: number bit.rrotate(number base[, number amount[, number bits]])

Rotate <br/> <br/>bits>-bit (max 48, default 48) number <br/>base> right by <amount> (default 1) places.

#### 4.7 bit.lshift: Shift a number left

• Syntax: number bit.lshift(number base[, number amount[, number bits]])

Shift < bits>-bit (max 48, default 48) number < base> left by < amount> (default 1) places. The new bits are filled with zeroes.

#### 4.8 bit.lrshift: Shift a number right (logical)

• Syntax: number bit.lrshift(number base[, number amount[, number bits]])

Shift <br/> <br/> <br/> default 48) number <br/> <br/> logically right by <amount> (default 1) places. The new bits are filled with zeroes.

#### 4.9 bit.arshift: Shift a number right (arithmetic)

• Syntax: number bit.arshift(number base[, number amount[, number bits]])

Shift <br/> <br/>bits>-bit (max 48, default 48) number <br/> <br/>base> logically right by <amount> (default 1) places. The new bits are shifted in with copy of the high bit.

#### 4.10 bit.extract: Extract/shuffle bits from number

• Syntax: number bit.extract(number base[, number bit0[, number bit1,...]])

Returns number that has bit0-th bit as bit 0, bit1-th bit as 1 and so on.

- Note: Bit numbers up to 51 should work reliably (then things start falling apart due to double precision issues).
- Note: There are two special bit positions, true and false, standing for always set bit and always clear bit.

## 4.11 bit.value: Construct number with specified bits set

• Syntax: number bit.value([number bit1[, number bit2,...]])

Returns bitwise OR of 1 left shifted by <bit1> places, 1 left shifted by <bit2> places and so on. As special value, nil argument is no-op.

## 4.12 bit.test any: Test if any bit is set

• Syntax: boolean bit.test any(number a, number b)

Returns true if bitwise and of  $\langle a \rangle$  and  $\langle b \rangle$  is nonzero, otherwise false.

## 4.13 bit.test all: Test if all bits are set

• Syntax: boolean bit.test all(number a, number b)

Returns true if bitwise and of <a> and <b> equals <b>, otherwise false.

#### 4.14 bit.popcount: Population count

• Syntax: number bit.popcount(number a)

Returns number of set bits in <a>.

#### 4.15 bit.clshift: Chained left shift

• Syntax: (number, number) bit.clshift(number a, number b, [number amount, [number bits]])

Does chained left shift on  $\langle a \rangle$ ,  $\langle b \rangle$  by  $\langle amount \rangle$  positions (default 1), assuming numbers to be of specified number of bits  $\langle bits \rangle$  (default 48).

#### 4.16 bit.crshift: Chained right shift

• Syntax: (number, number) bit.crshift(number a, number b, [number amount,[number bits]])

Does chained right shift on <a>, <b> by <amount> positions (default 1), assuming numbers to be of specified number of bits <br/>bits> (default 48).

## 4.17 bit.flagdecode: Decode bitfield into flags

• Syntax: string bit.flagdecode(number a, number bits, [string on, [string off]])

Return string of length bits where ith character is ith character of on if bit i is on, otherwise ith character of off. Out of range reads give last character.

- Note: <on> defaults to '\*' if empty.
- Note: <off> defaults to '-' if empty.

## 4.18 bit.rflagdecode: Decode bitfield into flags

• Syntax: string bit.rflagdecode(number a, number bits, [string on, [string off]])

Like bit.flagdecode, but outputs the string in the opposite order (most significant bit first).

## 5 Table gui:

- Functions that draw to screen can only only be called in on\_paint and on\_video callbacks or if non-default render queue has been set.
- Colors are 32-bit. Bits 0-7 are the blue component, bits 8-15 are the green component, bits 16-23 are the red component, bits 24-31 are alpha component (0 is fully opaque, 255 is almost transparent). -1 is the fully transparent color. Alternatively, colors can be given as strings naming the color.
- Alpha values greater than 127 do work properly.
- Origin of coordinates is at top left corner of game display area. Left and top gaps correspond to negative coordinates.
- The following color names are known: aliceblue antiquewhite antiquewhite. tiquewhite4 aqua aquamarine aquamarine1 aquamarine2 aquamarine3 aquamarine4 azure azure1 azure2 azure3 azure4 beige bisque bisque1 bisque2 bisque3 bisque4 black blanchedalmond blue blue1 blue2 blue3 blue4 blueviolet brown brown1 brown2 brown3 brown4 burlywood1 burlywood2 burlywood3 burlywood4 cadet  $cadetblue \ cadetblue \ 2\ cadetblue \ 2\ cadetblue \ 4\ chartreus \ e \ chartreus \ e \ 2\ chartreus \ e \ 2\ chartreus \ e \ 4$ chocolate chocolate1 chocolate2 chocolate3 chocolate4 coral coral1 coral2 coral3 coral4 cornflowerblue cornsilk cornsilk1 cornsilk2 cornsilk4 crimson cyan cyan1 cyan2 cyan3 cyan4 darkblue darkcyan darkgoldenrod darkgoldenrod1 darkgoldenrod2 darkgoldenrod3 darkgoldenrod4 darkgray darkgreen darkgrey darkkhaki darkmagenta darkolivegreen darkolive range1 darkorange2 darkorange3 darkorange4 darkorchid darkorchid1 darkorchid2 darkorchid3 darkorchid4 darkred darkseagreen d slategray darkslategray1 darkslategray2 darkslategray3 darkslategray4 darkslategray darkturquoise darkviolet deeppink deeppink deeppink deeppink deeppink deepskyblue deepskybl skyblue4 dimgray dimgrey dodgerblue dodgerblue1 dodgerblue2 dodgerblue3 dodgerblue4 firebrick firebrick1 firebrick2 firebrick3 firebrick4 floralwhite forestgreen fractal fuchsia gainsboro ghostwhite gold gold1 gold2 gold3 gold4 goldenrod goldenrod2 goldenrod3 goldenrod4 grav grav1 grav10 grav10 grav100 grav11 grav12 gray13 gray14 gray15 gray16 gray17 gray18 gray19 gray2 gray20 gray21 gray22 gray23 gray24 gray25 gray26 gray<br/>27 gray 28 gray 29 gray 30 gray 30 gray 31 gray 32 gray 33 gray 34 gray 35 gray 36 gray 37 gray 38 gray 39 gray 49 gray 30 gray 40 g gray40 gray41 gray42 gray43 gray44 gray45 gray46 gray47 gray48 gray49 gray5 gray50 gray51 gray52 gray53 gray54 gray55 gray56 gray57 gray58 gray59 gray69 gray60 gray61 gray62 gray63 gray64 gray65 gray66 gray67 gray68 gray69 gray70 gray70 gray71 gray72 gray73 gray74 gray75 gray76 gray77 gray78 gray79 gray89 gray80 gray81 gray82 gray83 gray84 gray85 gray86 gray87 gray88 gray89 gray99 gray90 gray91 gray92 gray93 gray94 gray95 gray96 gray97 gray98 gray99 green green1 green2 green3 green4 greenyellow grey grey0 grey1 grey10 grey100 grey11 grey12 grey13 grey14 grey15 grey16 grey17 grey18 grey19 grey2 grey20 grey21 grey22 grey23 grey24 grey25 grey26 grey27 grey28 grey29 grey3 grey30 grey31 grey32 grey33 grey34 grey35 grey36 grey37 grey37 grey38 grey39 grey4 grey40 grey41 grey42 grey43 grey44 grey45 grey46 grey47 grey48 grey49 grey50 grey50 grey51 grey52 grey53 grey54 grey55 grey56 grey57 grey58 grey59 grey69 grey60 grey61 grey62 grey63 grey64 grey65 grey66 grey66 grey68 grey69 grey7 grey70 grey71 grey72 grey73 grey74 grey75 grey76 grey76 grey77 grey78 grey79 grey80 grey80 grey81 grey82 grey83 grey84 grey85 grey86 grey87 grey88 grey89 grey99 grey90 grey91 grey92 grey93 grey94 grey95 grey96 grey97 grey98 grey99 honeydew honeydew1 honeydew2 honeydew3 honeydew4 hotpink hotpink1 hotpink2 hotpink3 hotpink4 indianred indianred1 indianred2 indianred3 indianred4 indigo ivory ivory1 ivory2 ivory3 ivory4 khaki khaki1 khaki2 khaki3 khaki4 lavender lavenderblush lavenderblush1 lavenderblush2 lavenderblush3 lavenderblush4 lawngreen lemonchiffon lemonchiffon1 lemonchiffon2 lemonchiffon3 lemonchiffon4 lightblue lightblue1 lightblue2 lightblue3 lightblue4 lightcoral lightcyan lightcyan1 lightcyan2 lightcyan3 lightcyan4 lightgoldenrod1 lightgoldenrod1 lightgoldenrod2 lightgoldenrod3 lightgoldenrod4 lightgoldenrod5 enrodyellow lightgray lightgreen lightgrey lightpink lig salmon1 lightsalmon2 lightsalmon3 lightsalmon4 lightseagreen lightskyblue lightskyblue1 lightskyblue2 lightskyblue3 lightskyblue4 lightslateblue lightslategray lightslategrey lightsteelblue1 lightsteelblue1 lightsteelblue2 lightsteelblue3 lightsteelblue4 lightyellow lightyellow1 lightyellow2 lightyellow3 lightyellow4 lime limegreen linen magenta1 magenta2 magenta3 magenta4 maroon maroon1 maroon2 maroon3 maroon4 mediumaquamarine mediumblue mediumforestgreen mediumgoldenrod mediumorchid mediu morchid3 mediumorchid4 mediumpurple mediumpurple1 mediumpurple2 mediumpurple3 mediumpurple4 mediumseagreen mediumslateblue mediumspringgreen mediumturquoise mediumvioletred midnightblue mintcream mistyrose 1 mistyrose 2 mistyrose 2 mistyrose 3 mistyrose 4 moccasin navajowhite navajowhite 1 navajowhite 2 navajowhite3 navajowhite4 navy navyblue oldlace olive olivedrab olivedrab1 olivedrab2 olivedrab3 olivedrab4 orange orange1 orange2 orange3 orange4 orangered orangered1 orangered2 orangered3 orangered4 orchid orchid1 orchid2 orchid4 palegoldenrod palegreen palegreen1 palegreen2 palegreen3 palegreen4 paleturquoise paleturquoise1 paleturquoise2 paleturquoise3 paleturquoise4 palevioletred1 palevioletred1 palevioletred2 palevioletred3 palevioletred4 papayawhip peachpuff1 peachpuff2 peachpuff3 peachpuff4 peru pink pink1

pink2 pink3 pink4 plum plum1 plum2 plum3 plum4 powderblue purple purple1 purple2 purple3 purple4 red red1 red2 red3 red4 rosybrown rosybrown1 rosybrown2 rosybrown3 rosybrown4 royalblue royalblue1 royalblue2 royalblue3 royalblue4 saddlebrown salmon salmon1 salmon2 salmon3 salmon4 sandybrown seagreen seagreen1 seagreen2 seagreen3 seagreen4 seashell seashell1 seashell2 seashell3 seashell4 sienna sienna1 sienna2 sienna3 sienna4 silver skyblue skyblue1 skyblue2 skyblue3 skyblue4 slateblue slateblue1 slateblue2 slateblue3 slateblue4 slategray slategray1 slategray2 slategray3 slategray4 slategrey snow snow1 snow2 snow3 snow4 springgreen springgreen1 springgreen2 springgreen3 springgreen4 steelblue steelblue1 steelblue2 steelblue3 steelblue4 tan tan1 tan2 tan3 tan4 teal thistle thistle1 thistle2 thistle3 thistle4 tomato tomato1 tomato2 tomato3 tomato4 transparent turquoise turquoise1 turquoise2 turquoise3 turquoise4 violet violetred1 violetred1 violetred2 violetred3 violetred4 wheat wheat1 wheat2 wheat3 wheat4 white whitesmoke yellow yellow1 yellow2 yellow3 yellow4 yellowgreen hsl-{r,ry,o,y,yg,g,gc,c,c,b,b,bm,m,mr}{0,1,2,3,4,5,6,7,8}{0,1,2,3,4,5,6,7,8}.

- The following modifiers can be applied: opaque10, opaque20, opaque25, opaque30, opaque40, opaque50, opaque60, opaque70, opaque75, opaque80, opaque90, opaque, hue{+,-}{1-23}, {saturation, lightness}{+,-}{1-16}.
- $\bullet$  HSL base color names: r => Red, ry => Red-Yellow (also o). y => Yellow, yg => Yellow-Green, g => Green, gc => Green-Cyan, c => Cyan, cb => Cyan-Blue, b => Blue, bm => Blue-Magenta, m => Magenta, mr => Magenta red.
- HSL colors use 8-step scales for saturation and lightness.
- Modifiers have opaqueness on percent scale (0 is transparent, 100 is fully opaque).
- Modifiers have Hue on 24-step scale (4 steps between R->Y->G->C->B->M->R).
- Modifiers have Saturation/Lightness on 16 step scale.

## 5.1 gui.resolution: Get current resolution

• Syntax: (number, number) gui.resolution()

Returns 2-tuple (hresolution, vresolution).

## 5.2 gui.left gap/gui.right gap/gui.top gap/gui.bottom gap: Set edge gaps

- Syntax: number gui.left gap(number gap)
- Syntax: number gui.right gap(number gap)
- Syntax: number gui.top gap(number gap)
- Syntax: number gui.bottom gap(number gap)

Set the specified edge gap to specified value <gap> (max gap is 8191). If successful, old gap is returned.

## 5.3 gui.delta\_left\_gap/gui.delta\_right\_gap/gui.delta\_top\_gap/gui.delta\_bottom\_gap: Adjust edge gaps

- Syntax: number gui.delta left gap(number dgap)
- Syntax: number gui.delta right gap(number dgap)
- Syntax: number gui.delta top gap(number dgap)
- Syntax: number gui.delta bottom gap(number dgap)

Increase the specified edge gap by specified value <dgap> (max gap is 8191) and return the old gap (returns nothing on error).

## 5.4 gui.text/gui.textH/gui.textV,gui.textHV: Draw text

- Syntax: none gui.text(number x, number y, string text[, number fgc[, number bgc]])
- Syntax: none gui.textH(number x, number y, string text[, number fgc[, number bgc]])
- Syntax: none gui.textV(number x, number y, string text[, number fgc[, number bgc]])
- Syntax: none gui.textHV(number x, number y, string text[, number fgc[, number bgc]])

Draw specified text on the GUI (each character cell is 8 or 16 wide and 16 high). Parameters:

- x: X-coordinate to start the drawing from (and x-coordinate at beginning of the lines).
- y: Y-coordinate to start the drawing from.
- text: The text to draw.
- fgc: Text color (default is 0xFFFFFF (white))
- bgc: Background color (default is -1 (transparent))

Note: The H variants draw at double width and V variants draw at double height.

#### 5.5 gui.rectangle: Draw a rectangle

• Syntax: none gui.rectangle(number x, number y, number width, number height[, number thickness[, number outline[, number fill]])

Draw rectangle on the GUI. Parameters:

- x: X-coordinate of left edge.
- y: Y-coordinate of upper edge.
- width: Width of rectangle.
- height: Height of rectangle.
- thickness: Thickness of outline (default is 1).
- outline: Color of outline (default is 0xFFFFFF (white))
- fill: Color of fill (default is -1 (transparent))

#### 5.6 gui.box: Draw a 3D-effect box

• Syntax: none gui.box(number x, number y, number width, number height[, number thickness[, number outline1[,number outline2[, number fill]]]])

Draw rectangle with 3D effect on the GUI. Parameters:

- x: X-coordinate of left edge.
- y: Y-coordinate of upper edge.
- width: Width of rectangle.
- height: Height of rectangle.
- thickness: Thickness of outline (default is 1).
- outline1: First color of outline (default is 0xFFFFFF (white))
- outline2: First color of outline (default is 0x808080 (dark gray))
- fill: Color of fill (default is 0xC0C0C0 (light grayy))

#### 5.7 gui.pixel: Draw a single pixel

• Syntax: none gui.pixel(number x, number y[, number color])

Draw one pixel on the GUI. Parameters:

- x: X-coordinate of the pixel
- y: Y-coordinate of the pixel
- color: Color of the pixel (default is 0xFFFFFF (white))

#### 5.8 gui.crosshair: Draw a crosshair

• Syntax: none gui.crosshair(number x, number y[, number length[, number color]])

Draw a crosshair. Parameters:

- x: X-coordinate of the crosshair
- y: Y-coordinate of the crosshair
- length: Length of the crosshair lines (default 10).
- color: Color of the crosshair (default is 0xFFFFFF (white))

#### 5.9 gui.line: Draw a line

• Syntax: none gui.line(number x1, number y1, number x2, number y2[, number color])

Draw a thin line. Parameters:

- x1: X-coordinate of one end.
- y1: Y-coordinate of one end.
- x2: X-coordinate of the other end.
- y2: Y-coordinate of the other end.
- color: Color of the line (default is 0xFFFFFF (white)).

#### 5.10 gui.circle: Draw a (filled) circle

• Syntax: none gui.circle(number x, number y, number r[, number thick[, number border[, number fil]]])

Draw a circle. Parameters.

- x: X-coordinate of the center
- y: Y-coordinate of the center
- r: The radius of the circle
- thick: Border thickness
- border: Border color (default is 0xFFFFFF (white))
- fill: Fill color (default is -1 (transparent)).

## 5.11 gui.bitmap draw/(D)BITMAP:draw: Draw a bitmap

- Syntax: none gui.bitmap\_draw(number x, number y, BITMAP bitmap, PALETTE palette)
- Syntax: none gui.bitmap\_draw(number x, number y, DBITMAP bitmap)
- Syntax: none BITMAP:draw(number x, number y, PALETTE palette)
- Syntax: none DBITMAP:draw(number x, number y)

Draw a bitmap < bitmap > (or object) on screen with specified palette < palette> (if bitmap is paletted) . Parameters:

- x: X-coordinate of left edge.
- y: Y-coordinate of top edge.
- bitmap: The bitmap to draw
- palette: The palette to draw the bitmap using.

## 5.12 gui.palette new: Create a new palette

• Syntax: PALETTE gui.palette new()

Returns a new palette (initially all transparent).

## 5.13 gui.bitmap new: Create a new bitmap

• Syntax: BITMAP/DBITMAP gui.bitmap\_new(number w, number h, boolean direct[, bool icolor])

Returns a new bitmap/dbitmap.

Parameters:

- w: The width of new bitmap
- h: The height of new bitmap
- direct: If true, the returned bitmap is dbitmap, otherwise bitmap.
- icolor: Initital fill color (defaults to 0 on BITMAP, -1 on DBITMAP)

## 5.14 gui.bitmap load/gui.bitmap load str: Load a bitmap from file or string

- Syntax: DBITMAP/(BITMAP, PALETTE) gui.bitmap load(string file[, string base])
- Syntax: DBITMAP/(BITMAP, PALETTE) gui.bitmap load str(string content)

Reads file <file> (resolved relative to <base>) or string <content> and returns loaded bitmap/dbitmap (if bitmap, the second return value is palette for bitmap).

#### 5.15 gui.bitmap load png/gui.bitmap load png str: Load a bitmap from PNG

- Syntax: DBITMAP/(BITMAP, PALETTE) gui.bitmap\_load\_png(string file[, string base])
- Syntax: DBITMAP/(BITMAP, PALETTE) gui.bitmap\_load\_png\_str(string content)

Load a bitmap from PNG file <file> (resolved relative to <base>) or BASE64 encoded content < content>.

- If the PNG is of color type 3 (PALETTE), returns two values. First is BITMAP containing the image data from the PNG and second is PALETTE containing the palette data from the PNG.
- For color types 0 (GRAY), 2 (RGB), 4 (GRAY\_ALPHA) and 6 (RGBA), returns one DBITMAP containg the image data loaded from the PNG.

## 5.16 gui.bitmap load pal/gui.bitmap load pal str: Load a palette

- Syntax: PALETTE gui.bitmap load pal(string file[, string base])
- Syntax: PALETTE gui.bitmap\_load\_pal\_str(string content)

Load a palette from file <file>(resolved relative to <base>) or string <content>.

- The kinds of lines supported:
  - Blank or just whitespace: Ignored
  - First non-whitespace is '#': Ignored
  - < r > < g > < b >: Fully opaque color with specified RGB values (0-255)
  - -<r><g><b><a>: Color with specified RGB values (0-255) and specified alpha (0-256, 0 being fully transparent and 256 fully opaque).
  - transparent: Fully transparent color

## 5.17 gui.palette set/PALETTE:set: Set palette entry

- $\bullet$  Syntax: none gui.palette\_set(PALETTE palette, number index, number color)
- Syntax: none PALETTE:set(number index, number color)

Sets color in palette. Parameters:

- palette: The palette to manipulate
- index: Index of color (0-65535).
- color: The color value.

## 5.18 gui.bitmap pset/(D)BITMAP:pset: Set pixel in bitmap

- Syntax: none gui.bitmap pset(BITMAP/DBITMAP bitmap, number x, number y, number color)
- Syntax: none BITMAP:pset(number x, number y, number color)
- Syntax: none DBITMAP:pset(number x, number y, number color)

Sets specified pixel in bitmap. Parameters:

- bitmap: The bitmap to manipulate
- x: The x-coordinate of the pixel.
- y: The y-coordinate of the pixel.
- color: If bitmap is a bitmap, color index (0-65535). Otherwise color value.

## 5.19 gui.bitmap pget/(D)BITMAP:pget: Get pixel in bitmap

- Syntax: number gui.bitmap pget(BITMAP/DBITMAP bitmap, number x, number y)
- Syntax: number BITMAP:pget(number x, number y)
- Syntax: number DBITMAP:pget(number x, number y)

Gets specified pixel in bitmap. Parameters:

- bitmap: The bitmap to query
- x: The x-coordinate of the pixel.
- y: The y-coordinate of the pixel.

The bitmap color (color index if paletted, otherwise color value).

## 5.20 gui.bitmap size/(D)BITMAP:size: Get size of bitmap

- Syntax: (number, number) gui.bitmap size(BITMAP/DBITMAP bitmap)
- Syntax: (number, number) BITMAP:size()
- Syntax: (number, number) DBITMAP:size()

Get size of bitmap < bitmap>. The first return is the width, the second is the height.

• Note: Can be used anywhere.

## 5.21 gui.bitmap blit/(D)BITMAP:blit: Blit a bitmap into another

- Syntax: none gui.bitmap\_blit(BITMAP dest, number dx, number dy, BITMAP src, number sx, number sy, number w, number h[, number ck])
- Syntax: none gui.bitmap\_blit(DBITMAP dest, number dx, number dy, DBITMAP src, number sx, number sy, number w, number h[, number ck])
- Syntax: none gui.bitmap\_blit(DBITMAP dest, number dx, number dy, BITMAP src, PALETTE pal, number sx, number sy, number w, number ck])
- Syntax: none BITMAP::blit(number dx, number dy, BITMAP src, number sx, number sy, number w, number h[, number ck])
- Syntax: none DBITMAP::blit(number dx, number dy, DBITMAP src, number sx, number sy, number w, number h[, number ck])
- Syntax: none DBITMAP:blit(number dx, number dy, BITMAP src, PALETTE pal, number sx, number sy, number w, number h[, number ck])

Blit a part of bitmap to another (current object if any is destination). Parameters:

- dest: Destination to blit to.
- dx: left edge of target
- dy: Top edge of target
- src: The source to blit from.
- pal: The palette to use in blit.
- sx: left edge of source
- sy: Top edge of source
- w: Width of region
- h: Height of region.
- ck: Color key. Pixels of this color are not blitted.
  - If soruce bitmap is bitmap, this is color index of colorkey. Values outside range 0-65535 cause no key to be used as colorkey.
  - If source bitmap is dbitmap, this is the color value of colorkey.
  - May be absent or nil for no colorkey blit.

#### 5.22 gui.repaint: Arrange a repaint

• Syntax: none gui.repaint()

Request on repaint() to happen as soon as possible.

# ${\bf 5.23 \quad gui.synchronous\_repaint/RENDERQUEUE:synchronous\_repaint: \ Paint \ screen}$

- Syntax: none gui.synchronous repaint(RENDERQUEUE queue)
- Syntax: none RENDERQUEUE::synchronous repaint()

Paints specified render queue on screen right there and then.

## 5.24 gui.subframe update: Enable/Disable subframe updates

• Syntax: none gui.subframe update(boolean on)

Request subframe updates (calling on\_paint() on subframes) to happen (<on>=true) or not happen (<on>=false).

#### 5.25 gui.screenshot: Write a screenshot

• Syntax: none gui.screenshot(string filename)

Write PNG screenshot of the current frame (no drawings) to specified file <filename>.

## 5.26 gui.screenshot bitmap: Write a screenshot to bitmap

• Syntax: DBITMAP gui.screenshot\_bitmap()

Write PNG screenshot of the current frame (no drawings) to dbitmap and return the result.

## 5.27 gui.color: Compose a color.

- Syntax: number gui.color(number r, number g, number b[, number a])
- Syntax: number gui.color(string c)

Returns color (in notation Lua scripts use) corresponding to color (<r><,<g>,<b>), each component in scale 0-255.</r>
If <a> is specified, that is alpha (0 is fully transparent, 256(sic) is fully opaque). The default alpha is 256.

The form taking a string returns color corresponding color name.

## 5.28 gui.status: Set status variable

• Syntax: none gui.status(string name, string value)

Set status field "L[<name>]" to <value> in status area.

#### 5.29 gui.rainbow: Rainbow color calculation

• Syntax: number gui.rainbow(number step, number steps[, number color])

Perform hue rotation of color <color> (default bright red), by <step> steps. The number of steps per full rotation is given by absolute value of <steps>.

If <step> is negative, the rotation will be counterclockwise.

#### 5.30 gui.renderq new: Create a render queue

• Syntax: RENDERQUEUE gui.renderq new(number width, number height)

Create render queue with specified reported size and return it.

#### 5.31 gui.renderq clear/RENDERQUEUE:clear: Clear a render queue

- Syntax: none gui.renderq\_clear(RENDERQUEUE queue)
- Syntax: none RENDERQUEUE:clear()

Clear specified render queue.

## 5.32 gui.renderq set/RENDERQUEUE:set: Change active render queue

- Syntax: none gui.renderq set(RENDERQUEUE queue)
- Syntax: none RENDERQUEUE:set()

Switch to specified render queue. Use nil as queue to switch to default queue.

• Note: When switched to another queue, all drawing functions work and draw there, even outside on video/on paint.

## .33 gui.renderq run/RENDERQUEUE:run: Run render queue

- Syntax: none gui.renderq run(RENDERQUEUE queue)
- Syntax: none RENDERQUEUE:run()

Run specified render queue, copying the objects to current render queue.

• Warning: Don't try to run the current render queue.

## 5.34 RENDERQUEUE:render: Render a queue to DBITMAP

• Syntax: DBITMAP RENDERQUEUE:render()

Renders the specified render queue to a bitmap, the base bitmap size (modified by gaps) being the nominal screen size for render queue.

## 5.35 gui.loadfont: Load a font file

• Syntax: CUSTOMFONT gui.loadfont([string filename])

Loads font from specified file (CUSTOMFONT object). If filename is not given, loads the system default font.

#### 5.36 CUSTOMFONT(): Render text to screen

• Syntax: none CUSTOMFONT(number x, number y, string text[, number fgc[, number bgc[, number hlc]]])

Draw string with custom font to screen. The parameters are the same as in gui.text, except <hlc> is the halo color (default is no halo).

# 5.37 gui.adjust\_transparency/DBITMAP:adjust\_transparency/PALETTE:adjust\_transparency of DBITMAP or PALETTE

- Syntax: none gui.adjust transparency(DBITMAP obj, number adj)
- Syntax: none gui.adjust transparency(PALETTE obj, number adj)
- Syntax: none DBITMAP:adjust transparency(number adj)
- Syntax: none PALETTE:adjust transparency(number adj)

Multiply alpha channel of <obj> by <adj>/256. Useful for making "ghosts" out of solid bitmaps.

## 5.38 gui.kill frame: Kill video frame and associated sound

• Syntax: none gui.kill frame()

Kills the currently dumped video frame + the associated sound. Only valid in on video callback.

#### 5.39 gui.arrow: Draw an arrow

• Syntax: none gui.arrow(number x, number y, number length, number hwidth, number direction[, bool fill[, number color[, number twidth[, number hthick]]]])

Draws an arrow using color < color>. The tip of arrow is at (<x>, <y>). Other parameters:

- 1. <length>: The length of arrow tail.
- 2. <hwidth>: The width of arrow head. Should be odd.
- 3. <direction>: Direction of arrow. 0 is to right, +1 rotates 45 degrees counterclockwise.
- 4. <fill>: If true, fill the arrow head. Default false.
- 5. <twidth>: Tail width. Should be odd. Default 1.
- 6. <a href="https://doi.org/10.1016/j.chm.1016">https://doi.org/10.1016</a> (only used if <a href="mailto:sfalse">fill></a> is false). Default is <a href="mailto:twidth">twidth></a>.

## 5.40 gui.tilemap: Create a tilemap

• Syntax: TILEMAP gui.tilemap(number w, number h, number bw, number bh)

Create a new tilemap of size <w>\*<h>, with each cell being <bw>\*<bh>.

#### 5.41 TILEMAP:getsize: Query tilemap size

• Syntax: number, number TILEMAP:getsize()

Return size of tilemap (width first).

## 5.42 TILEMAP:getcsize: Query tilemap cell size

• Syntax: number, number TILEMAP:getcsize()

Return size of tilemap cell (width first).

#### 5.43 TILEMAP:get: Query tilemap cell

- Syntax: none TILEMAP:get(number x, number y)
- Syntax: dbitmap TILEMAP:get(number x, number y)
- Syntax: bitmap,palette TILEMAP:get(number x, number y)

Return contents of cell at  $\langle x \rangle, \langle y \rangle$ .

## 5.44 TILEMAP:set: Set tilemap cell

- Syntax: none TILEMAP:set(number x, number y)
- Syntax: none TILEMAP:set(number x, number y, dbitmap b)
- Syntax: none TILEMAP:set(number x, number y, bitmap b, palette p)

Set contents of cell at  $\langle x \rangle$ , $\langle y \rangle$ . If no bitmap/dbitmap is given, cell is cleared. Otherwise specified (d)bitmap is used (with specified palette if bitmap).

#### 5.45 TILEMAP:scroll: Scroll tilemap

- Syntax: none TILEMAP:scroll(number ox, number oy)
- Syntax: none TILEMAP:scroll(number ox, number oy, number x, number y, number w, number h)
- Syntax: none TILEMAP:scroll(number ox, number oy, number x, number y, number w, number h, boolean circx, boolean circy)

Scrolls the tilemap tiles by  $<\infty$ ,  $<\infty$ ,  $<\omega$ ,  $<\psi$ ,  $<\omega$ ,

If <circx> is true, the window is circular in horizontal direction. Similarly with <circy> and vertical direction.

#### 5.46 TILEMAP:draw: Draw tilemap

- Syntax: none TILEMAP:draw(number x, number y)
- Syntax: none TILEMAP:draw(number x, number y, number x0, number y0)
- Syntax: none TILEMAP:draw(number x, number y, number x0, number y0, number w, number h)

Draw tilemap at  $\langle x \rangle, \langle y \rangle$ . If  $\langle x 0 \rangle, \langle y 0 \rangle$  is given, that is tilemap coordinate (in pixels) of upper left edge. If  $\langle w \rangle, \langle h \rangle$  is given, that is the size of window to draw (in pixels)

## 5.47 gui.bitmap save png/(D)BITMAP:save png: Save a bitmap to PNG

- Syntax: none gui.bitmap save png(string filename[, string base], BITMAP bmp, PALETTE pal)
- Syntax: none gui.bitmap save png(string filename[, string base], DBITMAP bmp)
- Syntax: string gui.bitmap save png(BITMAP bmp, PALETTE pal)
- Syntax: string gui.bitmap save png(DBITMAP bmp)
- Syntax: none BITMAP:save png(string filename[, string base], PALETTE pal)
- Syntax: none DBITMAP:save png(string filename[, string base])
- Syntax: string BITMAP:save\_png(PALETTE pal)
- Syntax: string DBITMAP:save png()

Save specified bitmap <br/> | (or current object), with palette <pal> (only if paletted) into PNG file <filename> (relative to <br/> | (base>) or return BASE64 encoding as return value.

## 5.48 gui.bitmap hash/(D)BITMAP:hash: Hash a bitmap

- Syntax: string gui.bitmap hash(BITMAP bmp)
- Syntax: string gui.bitmap\_hash(DBITMAP bmp)
- Syntax: string BITMAP:hash()
- Syntax: string DBITMAP:hash()

Hashes bitmap <br/> | (or current object) and returns 64-hex digit crypto-strong hash. Identical bitmaps result in indentical hashes (but color order in indexed bitmaps is significant).

#### 5.49 gui.palette hash/PALETTE:hash: Hash a palette

- Syntax: string gui.palette hash(PALETTE pal)
- Syntax: string PALETTE:hash(PALETTE pal)

Hashes palette <pal> (or current object) and retruns 64-hex digit crypto-strong hash. Identical palettes result in identical hashes (fully transparent colors at end of palette don't affect the hash).

## 6 table input

Input handling. Functions manipulating input are only available in on input callback.

## 6.1 input.get: Read controller button/axis (deprecated)

• Syntax: number input.get(number controller, number index)

Read the specified index <index> (zero-based) from specified controller <controller> (zero-based).

## 6.2 input.set: Write controller button/axis (deprecated)

• Syntax: none input set (number controller, number index, number value)

Write the specified index <index> (zero-based) from specified controller <controller> (zero-based), storing value <value>.

## 6.3 input.get2: Read controller button/axis

• Syntax: number input.get2(number port, number controller, number index)

Read the specified input tuple. Port 0 is system port.

#### 6.4 input.set2: Write controller button/axis

• Syntax: input.set2(number port, number controller, number index, number value)

Write the specified input tuple. Port 0 is system port.

## 6.5 input.lcid to pcid2: Look up logical controller

• Syntax: (number, number) input.lcid to pcid2(number lcid)

Look up physical pcid pair (port, controller) corresponding to specified logical controller (1-based). Returns nothing if controller does not exist.

#### 6.6 input.port type: Look up port type

• Syntax: string input.port\_type(number port)

Return type of specified port.

## 6.7 input.controller info: Get information about controller

• Syntax: table input.controller info(number port, number controller)

Get controller info for specified controller. If controller does not exist, returns nil. Otherwise returns a table with following fields:

- type (string): Type of the controller.
- class (string): Class of the controller.
- classnum (number): Number of the controller within its class (1-based)
- lcid (number): Logical controller number of the controller.
- button count (number): Number of buttons on controller
- buttons (array): Array of following info about each button:
  - type (string): Type of button. Currently one of "null", "button", "axis", "raxis".
  - name (string): Name of button.
  - symbol (string): Symbol of button. Only present for type "button".
  - hidden (boolean): True if hidden button.

#### 6.8 input.veto button: Veto a button press

• Syntax: none input.veto button()

Signals that the button event should be vetoed. Only valid in on button callback.

## 6.9 input.geta: Get all buttons for controller (deprecated)

• Syntax: (number, number...) input.geta(number controller)

Get input state for entiere controller. Returns n return values.

- 1st return value: Bitmask: bit i is set if i:th index is nonzero
- 2nd- return value: value of i:th index.

## 6.10 input.seta: Set all buttons for controller (deprecated)

• Syntax: none input.seta(number controller, number bitmask, number args...)

Set state for entiere controller. args is up to N values for indices (overriding values in bitmask if specified).

## 6.11 input.controllertype: Get controller type (deprecated)

• syntax: string input.controllertype(number controller)

Get the type of controller as string.

## 6.12 input.reset: Execute (delayed) reset

• Syntax: none input.reset([number cycles])

Execute reset. If <cycles> is greater than zero, do delayed reset. 0 (or no value) causes immediate reset.

• Note: Only available with subframe flag false.

#### 6.13 input.raw: Return raw input data

• Syntax: table input.raw()

Returns table of tables of all available keys and axes. The first table is indexed by key name (platform-dependent!), and the inner table has the following fields:

- value: Last reported value for control
  - For keys: 1 for pressed, 0 for released.
  - For axes: -32767...32767.
  - For presure-sensitive buttons: 0...32767.
  - For hats: Bitmask: 1=>Up, 2=>Right, 4=>Down, 8=>Left.
  - For mouse: Coordinates relative to game area.
- ktype: Type of key (disabled, key, mouse, axis, hat, pressure).

#### 6.14 input.keyhook: Hook a key

• Syntax: none input.keyhook(string key, boolean state)

Requests that keyhook events to be sent for key <key> (<state>=true) or not sent (<state>=false).

#### 6.15 input.joyget: Get controls for controller

• Syntax: table input.joyget(number logical)

Returns table for current controls for specified logical controller <logical>. The names of fields vary by controller type.

- The buttons have the same name as those are referred to in other contexts in the emulator
- The analog axes are usually "xaxis" and "yaxis".
- Each field is numeric or boolean depending on axis/button.

## 6.16 input.joyset: Set controls for controller

• Syntax: none input.joyset(number controller, table controls)

Set the the state of specified controller to values specified in specified table.

- Each field can be boolean or number.
- Also, buttons allow strings, which cause value to be inverted.

## 6.17 input.lcid to pcid: Look up logical controller (deprecated)

• Syntax: (number, number, number) input.lcid\_to\_pcid(number lcid)

Returns the legacy pcid for controller (or false if there isn't one), followed by pcid pair. Returns nothing if controller does not exist.

## 7 Table keyboard

Various keybinding-related functions

## 7.1 keyboard.bind: Bind a key

• Syntax: none keyboard.bind(string mod, string mask, string key, string cmd)

Bind specified key with specified modifiers to specified command.

## 7.2 keyboard.unbind: Unbind a key

• Syntax: none keyboard.unbind(string mod, string mask, string key)

Unbind specified key with specified modifers.

## 7.3 keyboard.alias: Set alias expansion

• Syntax: none keyboard.alias(string alias, string expansion)

Set expansion of given command.

## 8 Table subtitle

Subtitle handling

## 8.1 subtitle.byindex: Look up start and length of subtitle by index

• Syntax: (number, number) subtitle.byindex(number i)

Read the frame and length of ith subtitle. Returns nothing if not present.

#### 8.2 subtitle.set: Write a subtitle

Set the text of subtitle.

## 8.3 subtitle.get: Read a subtitle

• Syntax: string subtitle.get(number f, number l)

Get the text of subtitle.

#### 8.4 subtitle.delete: Delete a subtitle

• Syntax: nonesubtitle.delete(number f, number l)

Delete specified subtitle.

## 9 Table hostmemory

Host memory handling (extra memory saved to savestates). Host memory starts empty.

- Reads out of range return false.
- Writes out of range extend the memory.

## 9.1 hostmemory.read: Read byte from host memory

• Syntax: number hostmemory.read(number address)

Reads byte from hostmemory slot address < address >.

## 9.2 hostmemory.write: Write byte to host memory

• Syntax: none hostmemory.write(number address, number value)

Writes hostmemory slot with value < value > 0-255.

## 9.3 hostmemory.read{,s}{byte,{,h,d,q}word}: Read from host memory

- Syntax: number hostmemory.readbyte(number address)
- Syntax: number hostmemory.readsbyte(number address)
- Syntax: number hostmemory.readword(number address)
- Syntax: number hostmemory.readsword(number address)
- Syntax: number hostmemory.readhword(number address)
- Syntax: number hostmemory.readshword(number address)
- Syntax: number hostmemory.readdword(number address)
- Syntax: number hostmemory.readsdword(number address)
- Syntax: number hostmemory.readqword(number address)
- Syntax: number hostmemory.readsqword(number address)

Read elements (big-endian) from given address < address >.

- byte is 1 element
- word is 2 elements
- hword is 3 elements
- dword is 4 elements
- qword is 8 elements.
- The 's' variants do signed read.

## 9.4 hostmemory.read{float,double}: Read from host memory

- syntax: number hostmemory.readfloat(number address)
- Syntax: number hostmemory.readdouble(number address)

Read elements (big-endian) floating-pont from given address < address >.

## 9.5 hostmemory.write{,s}{byte,{,h,d,q}word}: Write to host memory

- Syntax: number hostmemory.writebyte(number address, number value)
- Syntax: number hostmemory.writesbyte(number address, number value)
- Syntax: number hostmemory.writeword(number address, number value)
- Syntax: number hostmemory.writesword(number address, number value)
- Syntax: number hostmemory.writehword(number address, number value)
- Syntax: number hostmemory.writeshword(number address, number value)
- Syntax: number hostmemory.writedword(number address, number value)
- Syntax: number hostmemory.writesdword(number address, number value)
- Syntax: number hostmemory.writeqword(number address, number value)
- Syntax: number hostmemory.writesqword(number address, number value)

Write value < value > to elements (little-endian) starting from given address < address >.

- byte is 1 element
- word is 2 elements
- hword is 3 elements
- dword is 4 elements
- qword is 8 elements.
- The 's' variants do signed write.

## 9.6 hostmemory.write{float,double}: Write to host memory

- syntax: none hostmemory.readfloat(number address, number value)
- Syntax: none hostmemory.readdouble(number address, number value)

 $\label{thm:write elements} Write \ elements \ (big-endian) \ floating-pont \ to \ given \ address < address>, \ storing < value>.$ 

#### 10 Table movie

Movie handling

#### 10.1 movie.currentframe: Get current frame number

• Syntax: number movie.currentframe()

Return number of current frame.

#### 10.2 movie.framecount: Get move frame count

• Syntax: number movie.framecount()

Return number of frames in movie.

#### 10.3 movie.readonly: Is in readonly mode?

• Syntax: boolean movie.readonly()

Return true if in readonly mode, false if in readwrite.

#### 10.4 movie.rerecords: Movie rerecord count

• Syntax: number movie.rerecords()

Returns the current value of rerecord count.

## 10.5 movie.set readwrite: Set read-write mode.

• Syntax: none movie.set readwrite()

Set readwrite mode (does not cause on readwrite callback).

## 10.6 movie.frame subframes: Count subframes in frame

• Syntax: number movie.frame\_subframes(number frame)

Count number of subframes in specified frame <frame> (frame numbers are 1-based) and return that.

#### 10.7 movie.read subframes: Read subframe data (deprecated)

• Syntax: table movie.read subframes(number frame, number subframe)

Read specified subframe in specified frame and return data as array.

#### 10.8 movie.read rtc: Read current RTC time

• Syntax: (number, number) movie.read rtc()

Returns the current value of the RTC as a pair (second, subsecond).

#### 10.9 movie.unsafe rewind: Fast movie rewind to saved state

• Syntax: none movie.unsafe\_rewind([UNSAFEREWIND state])

Start setting point for unsafe rewind or jump to point of unsafe rewind.

- If called without argument, causes emulator to start process of setting unsafe rewind point. When this has finished, callback on set rewind occurs, passing the rewind state to lua script.
- If called with argument, causes emulator rewind to passed rewind point as soon as possible. Readwrite mode is implicitly activated.

The following warnings apply to unsafe rewinding:

- There are no safety checks against misuse (that's what "unsafe" comes from)!
- Only call rewind from timeline rewind point was set from.
- Only call rewind from after the rewind point was set.

## 10.10 movie.to rewind: Load savestate as rewind point

• Syntax: UNSAFEREWIND movie.to rewind(string filename)

Load specified savestate file <filename> as rewind point and return UNSAFEREWIND corresponding to it.

• Note: This operation does not take emulated time.

## 10.11 movie.copy movie/INPUTMOVIE::copy movie: Copy movie to movie object

- Syntax: INPUTMOVIE movie.copy movie([INPUTMOVIE movie])
- Syntax: INPUTMOVIE INPUTMOVIE::copy movie()

Copies specified movie < movie > /current object (if none or nil, the active movie) as new movie object.

## 10.12 movie.get frame/INPUTMOVIE::get frame: Read specified frame in movie.

- Syntax: INPUTFRAME movie.get frame([INPUTMOVIE movie,] number frame)
- Syntax: INPUTFRAME INPUTMOVIE::get frame(number frame);

Get INPUTFRAME object corresponding to specified frame in specified movie.

## 10.13 movie.set frame/INPUTMOVIE::set frame: Write speicifed frame in movie.

- Syntax: none movie.set\_frame([INPUTMOVIE movie,] number frame, INPUTFRAME data)
- Syntax: none INPUTMOVIE::set frame(number frame, INPUTFRAME data)

Set data in specified frame.

• Note: Past can't be edited in active movie.

## $10.14 \quad movie.get \quad size/INPUTMOVIE::get\_size: \ Get \ size \ of \ movie$

- Syntax: integer movie.get size([INPUTMOVIE movie])
- Syntax: integer INPUTMOVIE::get size()

Return number of subframes in specified movie.

## 10.15 movie.count frames/INPUTMOVIE::count frames: Count frames in movie

- Syntax: number movie.count frames([INPUTMOVIE movie])
- Syntax: number INPUTMOVIE::count frames()

Return number of frames in movie.

# 10.16 movie.find\_frame/INPUTMOVIE::find\_frame: Find subframe corresponding to frame

- Syntax: number movie.find frame([INPUTMOVIE movie], number frame)
- Syntax: number INPUTMOVIE::find frame(number frame)

Returns starting subframe of given frame (frame numbers are 1-based). Returns -1 if frame number is bad.

#### 10.17 movie.blank frame/INPUTMOVIE::blank frame: Return a blank frame

- Syntax: INPUTFRAME movie.blank frame([INPUTMOVIE movie])
- Syntax: INPUTFRAME INPUTMOVIE::blank frame()

Return blank INPUTFRAME with frame type from specified movie.

## 10.18 movie.append frames/INPUTMOVIE::append frames: Append blank frames

- Syntax: none movie.append frames([INPUTMOVIE movie,] number frames)
- Syntax: none INPUTMOVIE::append frames(number frames)

Append specified number <frames> of frames.

## 10.19 movie.append frame/INPUTMOVIE::append frame: Append a frame

- Syntax: none movie.append frame([INPUTMOVIE movie,] INPUTFRAME frame)
- Syntax: none INPUTMOVIE::append frame(INPUTFRAME frame)

Append specified frame < frame >. Past of current movie can't be edited.

## 10.20 movie.truncate/INPUTMOVIE::truncate: Truncate a movie.

- Syntax: none movie.truncate([INPUTMOVIE movie,] number frames)
- Syntax: none INPUTMOVIE::truncate(number frames)

Truncate the specified movie to specified number of frames.

## 10.21 movie.edit/INPUTMOVIE::edit: Edit a movie

- Syntax: none movie.edit([INPUTMOVIE movie,] number frame, number port, number controller, number control, number/bool value)
- Syntax: none INPUTMOVIE::edit(number frame, number port, number controller, number control, number/bool value)

Change specified control in specified frame in specified movie. Past can't be edited in active movie.

#### 10.22 movie.copy frames2: Copy frames between movies

• Syntax: none movie.copy\_frames2([INPUTMOVIE dstmov,] number dst, [INPUTMOVIE srcmov,] number src, number count)

Copy specified number of frames between two movies. The copy proceeds in forward direction.

## 10.23 movie.copy frames/INPUTMOVIE::copy frames: Copy frames in movie

- Syntax: none movie.copy\_frames([INPUTMOVIE mov,] number dst, number src, number count, bool backwards)
- Syntax: none INPUTMOVIE::copy frames(number dst, number src, number count, bool backwards)

Copy specified number of frames from one point in movie to another. If backwards is true, the copy will be done backwards.

#### 10.24 movie.serialize/INPUTMOVIE::serialize: Serialize movie

- Syntax: none movie.serialize([INPUTMOVIE movie,] string filename, bool binary)
- Syntax: none INPUTMOIVE::serialize(string filename, bool binary)

Serialize given movie into file. If binary is true, binary format (more compact and much faster) is used.

#### 10.25 movie.unserialize: Unserialize movie

• Syntax: INPUTMOVIE movie.unserialize(INPUTFRAME template, string filename, bool binary)

Unserialize movie from file. The given frame is used as template to decide the frame type. If binary is true, binary format is decoded (much faster).

## 10.26 movie.current first subframe: Return first subframe in current frame

• Syntax: number movie.current first subframe()

Returns first subframe in current frame.

## 10.27 movie.pollcounter: Return poll counter for speified control

• Syntax: number movie.pollcounter(number port, number controller, number control)

Returns number of times the specified control has been polled this frame.

## 10.28 INPUTFRAME::get button: Get button

• Syntax: boolean INPUTFRAME::get\_button(number port, number controller, number control)

Returns state of given button as boolean.

## 10.29 INPUTFRAME::get axis: Get axis

• Syntax: number INPUTFRAME::get axis(number port, number controller, number control)

Returns state of given axis as number.

## 10.30 INPUTFRAME::set button/INPUTFRAME::set axis: Set button or axis

- Syntax: none INPUTFRAME::set\_button(number port, number controller, number control, number/bool value)
- $\bullet \ \ Syntax: \ none \ INPUTFRAME:: set\_axis (number \ port, \ number \ controller, \ number \ control) \\$

Set the given button/axis to given value.

#### 10.31 INPUTFRAME::serialize: Serialize a frame

• Syntax: string INPUTFRAME::serialize()

Return string representation of frame.

#### 10.32 INPUTFRAME::unserialize: Unserialize a frame

• Syntax: none INPUTFRAME::unserialize(string data)

Set current frame from given data.

## 10.33 INPUTFRAME::get stride: Get movie stride

• Syntax: number INPUTFRAME::get stride()

Return number of bytes needed to store the input frame. Mainly useful for some debugging.

## 11 Table settings

Routines for settings manipulation

## 11.1 settings.get: Get value of setting

• Syntax: string settings.get(string name)

Get value of setting <name>. If setting value can't be obtained, returns (nil, error message).

## 11.2 settings.set: Set value of setting

• Syntax: none settings.set(string name, string value)

Set value < value> of setting < name>. If setting can't be set, returns (nil, error message).

## 12 Table memory

Contains various functions for managing memory

## 12.1 memory.vma count: Count number of VMAs.

• Syntax: number memory.vma count()

Returns the number of VMAs

## 12.2 memory.read vma: Lookup VMA info by index

• Syntax: string memory.read\_vma(number index)

Reads the specified VMA (indices start from zero). Trying to read invalid VMA gives nil. The read VMA is table with the following fields:

- region name (string): The readable name of the VMA
- baseaddr (number): Base address of the VMA
- lastaddr (number): Last address in the VMA.
- size (number): The size of VMA in bytes.
- readonly (boolean): True of the VMA corresponds to ROM.
- iospace (boolean): True if the VMA is I/O space.
- native\_endian (boolean): True if the VMA has native endian as opposed to little endian.

## 12.3 memory.find vma: Find VMA info by address

• Syntax: table memory.find vma(number address)

Finds the VMA containing specified address. Returns table in the same format as read vma or nil if not found.

## 12.4 memory.read $\{,s\}$ {byte, $\{,h,d,q\}$ word}: Read memory

- Syntax: none memory.readbyte([string vma, ]number address)
- Syntax: none memory.readword([string vma, |number address)
- Syntax: none memory.readhword([string vma, |number address)
- Syntax: none memory.readdword([string vma, ]number address)
- Syntax: none memory.readqword([string vma, ]number address)
- $\bullet$  Syntax: none memory.readsbyte ([string vma, ]number address)
- Syntax: none memory.readsword([string vma, ]number address)
- Syntax: none memory.readshword([string vma, ]number address)
- Syntax: none memory.readsdword([string vma, ]number address)
- Syntax: none memory.readsqword([string vma, |number address)

Reads the specified address <address> (if 's' variant is used, do undergo 2's complement).

## 12.5 memory.{,s}read sg: Scatter/Gather read memory

- Syntax: none memory.read sg(string/boolean/number...)
- Syntax: none memory.sread sg(string/boolean/number...)

Perform (2s complement signed if using memory.sread\_sg) scatter/gather read of memory. Each argument can be string, boolean or number:

- String: Set VMA addresses are relative to (e.g. 'WRAM').
- boolean: If true, increment relative address by 1, if false, decrement by 1. The new address is read as next higher byte.
- integer: Set the relative address to specified value and read the address as next higher byte.

## 12.6 memory.write sg: Scatter/Gather write memory

• Syntax: none memory.write sg(number value, string/boolean/number...)

Perform scatter/gather write of value < value > on memory. Each argument can be string, boolean or number:

- String: Set VMA addresses are relative to (e.g. 'WRAM').
- boolean: If true, increment relative address by 1, if false, decrement by 1. The new address is read as next higher byte.
- integer: Set the relative address to specified value and read the address as next higher byte.

## 12.7 memory.read{float,double}: Read memory

- Syntax: none memory.readfloat([string vma, ]number address)
- Syntax: none memory.readdouble([string vma, ]number address)

Reads the specified address < address >

## 12.8 memory.write{byte,{,h,d,q}word,float,double}: Write memory

- Syntax: none memory.writebyte([string vma, |number address, number value)
- Syntax: none memory.writeword([string vma, ]number address, number value)
- Syntax: none memory writehword ([string vma, |number address, number value)
- Syntax: none memory.writedword([string vma, |number address, number value)
- Syntax: none memory.writeqword([string vma, ]number address, number value)
- Syntax: none memory.writefloat([string vma, |number address, number value)
- Syntax: none memory.writedouble([string vma, |number address, number value)

Writes the specified value < value> (negative integer values undergo 2's complement) to specified address < address>.

## 12.9 memory.map $\{\{,s\}\{byte,\{,h,d,q\}word\},float,double\}$ : Map an array

• Syntax: userdata memory.map<type>([[string vma, |number base, number size])

Returns a table mapping specified memory aperture for read/write. If parameters are omitted, entiere map space is the aperture.

• Type may be one of: byte, sbyte, word, sword, hword, shword, dword, sdword, qword, sqword, float or double.

## 12.10 memory.hash region: Hash region of memory

• Syntax: string memory.hash region([string vma, |number base, number size)

Hash specified number of bytes starting from specified address and return the SHA-256.

## 12.11 memory.hash state: Hash system state

• Syntax: string memory.hash state()

Hash the current system state. Mainly useful for debugging savestates.

#### 12.12 memory.readregion: Read region of memory

• Syntax: table memory.readregion([string vma, ]number base, number size)

Read a region of memory.

• Warning: If the region crosses VMA boundary, the results are undefined.

## 12.13 memory.writeregion: Write region of memory

• Syntax: none memory.writeregion([string vma, ]number base, number size, table data)

Write a region of memory.

• Warning: If the region crosses VMA boundary, the results are undefined.

## 12.14 memory.map structure: Create mmap structure

• syntax: MMAP STRUCT memory.map structure()

Returns a new mapping structure (MMAP\_STRUCT)

## 12.15 MMAP STRUCT(): Bind key in mmap structure

• Syntax: none MMAP\_STRUCT(string key, [string vma, ]number address, string type)

Bind key <key> in mmap structure to specified address <address> with specified type <type>.

• Type may be one of: byte, sbyte, word, sword, hword, shword, dword, sdword, qword, sqword, float or double.

#### 12.16 memory.read expr: Evaluate memory watch expression

• Syntax: string memory.read expr(string expr)

Evaluate specified watch expression and return result

#### 12.17 memory.action: Run core action

• memory.action(string action, [<params>])

Run core action. The different models expect parameters as:

• string: String

• numeric: numeric

 $\bullet\,$  enumeration: String

• boolean: String

• toggle: None.

#### 12.18 memory.get lag flag: Get lag flag

• Syntax: boolean memory.get\_lag\_flag()

Get the value of core lag flag. True if this frame has been lag so far, false if poll has been detected.

## 12.19 memory.set lag flag: Set lag flag

• Syntax: none memory.set lag flag(boolean flag)

Set the value of core lag flag. This flag automatically gets cleared if poll is detected, but can be forcibly set or cleared if game so requires.

- Should only be used in on frame emulated callback.
- Setting or clearing this affects the emulator lag counter.

# 12.20 memory.{,un}register{read,write,exec}: (Un)Register read / write / execute callback

- Syntax: function memory.registerread([string vma, ] number addr, function fn);
- Syntax: function memory.registerwrite([string vma, ] number addr, function fn);
- Syntax: function memory.registerexec([string vma, ] number addr, function fn);
- Syntax: none memory.unregisterread([string vma, ] number addr, function fn);
- Syntax: none memory.unregisterwrite([string vma, ] number addr, function fn);
- Syntax: none memory.unregisterexec([string vma, ] number addr, function fn);

Add or remove callback on memory read, write or execute (depending on the function). If <vma> is specified, <addr> is relative to it, otherwise <addr> is global. <fn> is the callback. The register\* functions return <fn> (which can then be passed to unregister\* functions.

- Not all cores support this, and it may be unsupported for some VMAs.
- The functions are passed two parameters: Address and value.

## 12.21 memory.{,un}registertrace: Set/Clear trace hook

- Syntax: function memory.registertrace(number processor, function fn);
- Syntax: none memory.unregistertrace(number processor, function fn);

Add or remove trace callback. <processor> is system-dependent processor number (0 is usually main CPU). The function arguments work like in other (un)register\* functions.

• The functions are passed two parameters: Trace CPU and Trace event string.

#### 12.22 memory.cheat: Set cheat

- Syntax: none memory.cheat([string vma, | number addr, number value);
- Syntax: none memory.cheat([string vma, ] number addr);

Set or clear cheat (value < value>) on address < addr>. If < vma> is specified, < addr> is relative to that. If < value> is not specified, clear a cheat.

• Not all cores support this, and it may be unsupported for some VMAs.

#### 12.23 memory.setxmask: Set global execute hook mask

• Syntax: none memory.setxmask(number mask)

Set the global execute hook mask to <mask>. The meaning of each bit is system-dependent, but bit 0 should be the main CPU.

## 13 Table memory2

Contains newer memory functions.

## $13.1 \quad \text{memory2}(): \text{ Get all VMA names.}$

• Syntax: table memory2()

Returns array of all valid VMA names.

#### 13.2 memory2.<vma>:info: Get VMA info

• Syntax: table memory2.<vma>:info()

Return table describing given VMA. Includes fields address, size, last, readonly, special and endian.

#### 13.3 memory2.<vma>:<op>: Read/Write memory

- Syntax: none memory2.<vma>:<op>(number offset, number value)
- Syntax: number memory2.<vma>:<op>(number offset)

Read/Write value from/to given VMA < vma> at given offset < offset> (must be in-range). The value written is < value>. < Op> is of form: [i][s] < type>, where:

- <type> is one of 'byte', 'word', 'hword', 'dword', 'qword', 'float', 'double'.
- 'i' signifies that the value is treated as opposite-to-normal endianess,
- 's' signifies that value is treated as signed (not available for floating-point).

## 13.4 memory2.<vma>:read: Scatter-gather value read

• Syntax: number memory2.<vma>:read(number addr...)

Read value from given VMA < vma> at byte offsets < addr>..., given in order of increasing significance. Value of true and false are special. True increments address by 1, and false decrements address by 1.

## 13.5 memory2.<vma>:sread: Signed scatter-gather value read

• Syntax: number memory2.<vma>:sread(number addr...)

Like memory2. <vma>:read, but reads signed values.

#### 13.6 memory2.<vma>:write: Scatter-gather value write

• Syntax: number memory2.<vma>:write(number val, number addr...)

Write value <val> to given VMA <vma> at byte offsets <addr>..., given in order of increasing significance. Value of true and false are special. True increments address by 1, and false decrements address by 1.

#### 14 Table random

Contains random number generation methods. These functions do not return reproducable results.

#### 14.1 random.boolean: Random boolean

• Syntax: boolean random.boolean()

Returns true or false at random (50-50 chance).

## 14.2 random.integer: Random integer

- Syntax: number random.integer(number highplusone)
- Syntax: number random.integer(number low, number high)

With one argument, return random integer [0,<highplusone>) (upper end exclusive). With two arguments, return random integer [<low>,<high>] (both ends inclusive).

The returned numbers are from uniform distribution.

#### 14.3 random.float: Random float

• Syntax: number random.float()

Returns random decimal number [0,1).

## 14.4 random.among: Random parameter

• Syntax: value random.among(value values...)

Returns random parameter value, picked at uniform. Multiple equivalent values are returned with higher chance.

## 14.5 random.amongtable: Random from table

• Syntax: value random.amongtable(table tab)

Returns random value from table <tab>. As in random among, no equality testing is done.

## 15 Table zip

#### 15.1 zip.create: Create a new zipfile

• Syntax: ZIPWRITER zip.create(string filename[, number compression])

Creates a new zipfile <filename>, with specified compression level <compression> (default 9).

#### 15.2 zip.enumerate: Enumerate members in zipfile

• Syntax: Table zip.enumerate(string filename[, boolean invert])

Returns table of files in zip archive <filename>. If <invert> is true, instead of returning array of names, returns table with keys being member names and values being true.

#### 15.3 ZIPWRITER:commit: Finish creating ZIP file.

• Syntax: none ZIPWRITER:commit()

Closes the ZIP archive. Nothing more can be written.

#### 15.4 ZIPWRITER:rollback: Delete the ZIP file being creted

• Syntax: none ZIPWRITER:rollback()

Deletes the newly written ZIP archive. Nothing more can be written.

## 15.5 ZIPWRITER:create file: Start writing a new member

• Syntax: none ZIPWRITER:create file(string filename)

Starts writing a new member <filename> in ZIP file. If member is open, it is closed.

#### 15.6 ZIPWRITER:close file: Close member

• Syntax: none ZIPWRITER:close file()

Closes member in ZIP file.

## 15.7 ZIPWRITER:write: Write data

• Syntax none ZIPWRITER:write(string data)

Writes data <data> into ZIP file (binary mode).

#### 16 Table callback

Various callback-related functions.

#### 16.1 callback.register: Register a callback

• Syntax: function callback.register(string cbname, function cbfun);

Instruct function < cbfun> to be added to list of callbacks to call on event < cbname> (See section 19). The callback name does not have the 'on ' prefix (e.g. "paint"). Returns < cbfun>.

#### 16.2 callback.unregister: Unregister a callback

• Syntax: function callback.unregister(string cbname, function cbfun);

Instruct function <cbfun> to be removed from list of callbacks to call on event <cbname>.

#### 16.3 callback.<cbname>:register: Register callback

• Syntax: function callback. < cbname>:register(function cbfun)

Synonym for callback.register (section 16.1), albeit with callback name specified differently.

#### 16.4 callback. <cbname>:unregister: Register callback

• Syntax: function callback. < cbname >: unregister (function cbfun)

Synonym for callback.unregister (section 16.2), albeit with callback name specified differently.

#### 17 table bsnes

Various bsnes-specific functions.

## 17.1 bsnes.dump sprite: Dump a sprite

• Syntax: BITMAP bsnes.dump\_sprite([string vma, ] number addr, number width, number height[, number stride])

Dumps given sprite (in native format) from memory. VMA is usually "VRAM". <Width> and <height> are given in 8x8 blocks. <Stride> overrides row stride (default 512).

## 17.2 bsnes.dump palette: Dump a palette

• Syntax: PALETTE bsnes.dump palette([string vma, ] number addr, bool full256, bool first trans)

Dumps a palette from memory. VMA is usually "CGRAM". If <full256> is true, 256 colors are dumped (otherwise 16). If <first\_trans> is true, first color is forced transparent.

# 18 Table SYSTEM

Contains copy of global variables from time of Lua initialization. Non-writeable.

## 19 Callbacks

Various callbacks to Lua that can occur.

## 19.1 on paint: Screen is being painted

• Callback: on paint(bool not synth)

Called when screen is being painted. Any gui. \* calls requiring graphic context draw on the screen.

• not synth is true if this hook is being called in response to received frame, false otherwise.

## 19.2 on video: Dumped video frame is being painted

• Callback: on\_video()

Called when video dump frame is being painted. Any gui.\* calls requiring graphic context draw on the video.

## 19.3 on frame emulated: Frame emulation complete

• Callback: on frame emulated()

Called when emulating frame has completed and on\_paint()/on\_video() calls are about to be issued.

## 19.4 on frame: Frame emulation starting.

• Callback: on frame()

Called on each starting whole frame.

## 19.5 on startup: Emulator startup complete

• Callback: on startup()

Called when the emulator is starting (Isnes.rc and -run files has been run).

#### 19.6 on rewind: Movie rewound to beginning

• Callback: on rewind()

Called when rewind movie to beginning has completed.

#### 19.7 on pre load: Load operation is about to start

• Callback: on pre load(string name)

Called just before savestate/movie load occurs (note: loads are always delayed, so this occurs even when load was initiated by lua).

#### 19.8 on err Load: Load failed

• Callback: on err load(string name)

Called if loadstate goes wrong.

## 19.9 on post load: Load completed

• Callback: on post load(string name, boolean was savestate)

Called on successful loadstate. was\_savestate gives if this was a savestate or a movie.

## 19.10 on pre save: Save operation is about to start

• Callback: on pre save(string name, boolean is savestate)

Called just before savestate save occurs (note: movie saves are synchronous and won't trigger these callbacks if called from Lua).

## 19.11 on err save: Save failed

• Callback: on err save(string name)

Called if savestate goes wrong.

## 19.12 on post save: Save completed

• Callback: on\_post\_save(string name, boolean is\_savestate)

Called on successful savaestate. is savestate gives if this was a savestate or a movie.

## 19.13 on quit: Emulator is shutting down

• Callback: on quit()

Called when emulator is shutting down.

## 19.14 on input: Polling for input

Called when emulator is just sending input to bsnes core. Warning: This is called even in readonly mode, but the results are ignored.

## 19.15 on reset: System has been reset

• Callback: on\_reset()

Called when system is reset.

## 19.16 on readwrite: Entered readwrite mode

• Callback: on\_readwrite()

Called when moving into readwrite mode as result of "set-rwmode" command (note: moving to rwmode by Lua won't trigger this, as per recursive entry protection).

## 19.17 on snoop/on snoop2: Snoop core controller reads

- Callback: on snoop(number port, number controller, number index, number value)
- Callback: on snoop2(number port, number controller, number index, number value)

Called each time bsnes asks for input. The value is the final value to be sent to bsnes core (readonly mode, autohold and autofire have been taken into account). Might be useful when translating movies to format suitable for console verification. Note: There is no way to modify the value to be sent.

• On\_snoop2 is called instead of on\_snoop if defined. Reserves port 0 for system, having first user port be port 1.

## 19.18 on keyhook: Hooked key/axis has been moved

• Callback: on keyhook(string keyname, table state)

Sent when key that has keyhook events requested changes state. Keyname is name of the key (group) and state is the state (same kind as table values in input.raw).

#### 19.19 on idle: Idle event

• Callback: on idle()

Called when requested by set idle timeout(), the timeout has expired and emulator is waiting.

#### 19.20 on timer: Timer event

• Callback: on timer()

Called when requested by set\_idle\_timeout() and the timeout has expired (regardless if emulator is waiting).

## 19.21 on set rewind: Rewind point has been set

• Callback: on set rewind(UNSAFEREWIND r)

Called when unsafe rewind object has been constructed.

## 19.22 on pre rewind: Rewind is about to occur

• Callback: on pre rewind()

Called just before unsafe rewind is about to occur.

## 19.23 on post rewind: Rewind has occured

• Callback: on\_post\_rewind()

Called just after unsafe rewind has occured.

## 19.24 on button: Button has been pressed

• Callback: on button(number port, number controller, number index, string type)

Called on controller button press, with following parameters:

- port: Port number (0 is system)
- controller: Controller within port
- index: Index of button.
- type: Type of event, one of:
  - "pressed": Button was pressed.
  - "released": Button was released.
  - "hold": Held.
  - "unhold": Released from hold.
  - "type": Typing input on button.
  - "untype": Typing input undone.
  - "autofire <duty> <cycle>": Autofire with specifie duty and cycle.
  - "autofire": Stop autofire.
  - "analog": Analog action on axis.

#### 19.25 on movie lost: Movie data is about to be lost

• Callback: on\_movie\_lost(STRING kind)

Called just before something would happen that could lose movie data. Kind can be:

- readwrite: Switching to readwrite mode.
- reload: ROM is being reloaded in readwrite mode.
- load: New movie is being loaded.
- unsaferewind: Unsafe rewind is happening.

#### 19.26 on latch: Latch line is rising

• Callback: on latch(<core-dependent-parameters>)

Called when latch line for controller is rising. Some cores may not support this.

## 20 System-dependent behaviour

#### 20.1 bsnes core

- Registers are: pbpc, pb, pc, r0, r1, r2, r3, r4, r5, a, x, y, z, s, d, db, p, e, irq, wai, mdr, vector, aa, rd, sp, dp, p n, p v, p m, p x, p d, p i, p z, p c, ppu display disabled, ppu oam priority, ppu bg tilesize[0], ppu\_bg\_tilesize[1], ppu\_bg\_tilesize[2], ppu\_bg\_tilesize[3], ppu\_bg3\_priority, ppu\_mosaic\_enabled[0], ppu\_mosaic ppu mosaic enabled[2], ppu mosaic enabled[3], ppu vram incmode, ppu mode7 vflip, ppu mode7 hflip, ppu window1 enabled[0], ppu window1 enabled[1], ppu window1 enabled[2], ppu window1 enabled[3], ppu window1 ppu window1 enabled[5], ppu window1 invert[0], ppu window1 invert[1], ppu window1 invert[2], ppu window1 ppu\_window1\_invert[4], ppu\_window1\_invert[5], ppu\_window2\_enabled[0], ppu\_window2\_enabled[1], ppu\_window ppu window2 enabled[3], ppu window2 enabled[4], ppu window2 enabled[5], ppu window2 invert[0], ppu window2 ppu window2 invert[2], ppu window2 invert[3], ppu window2 invert[4], ppu window2 invert[5], ppu bg enable ppu bg enabled[1], ppu bg enabled[2], ppu bg enabled[3], ppu bg enabled[4], ppu bgsub enabled[0], ppu bgsub ppu bgsub enabled[2], ppu bgsub enabled[3], ppu bgsub enabled[4], ppu window enabled[0], ppu window ena ppu window enabled[2], ppu window enabled[3], ppu window enabled[4], ppu sub window enabled[0], ppu sub window enabled[1], ppu sub window enabled[2], ppu sub window enabled[3], ppu sub window ena ppu addsub mode, ppu direct color, ppu color mode, ppu color halve, ppu color enabled[0], ppu color enab ppu color enabled[2], ppu color enabled[3], ppu color enabled[4], ppu color enabled[5], ppu mode7 extbg, ppu pseudo hires, ppu overscan, ppu oam interlace, ppu interlace, ppu latch hcounter, ppu latch vcounter, ppu counters latched, ppu time over, ppu range over, ppu ppu1 mdr, ppu ppu2 mdr, ppu bg y[0],  $ppu\_oam\_nameselect, ppu\_oam\_tdaddr, ppu\_oam\_baseaddr, ppu\_oam\_addr, ppu\_oam\_firstsprite, ppu\_oam\_lameselect, ppu\_oam\_tdaddr, ppu\_oam\_baseaddr, ppu\_oam\_addr, ppu\_oam\_firstsprite, ppu\_oam\_lameselect, ppu\_oam\_tdaddr, ppu\_oam\_baseaddr, ppu\_oam\_addr, ppu\_oam\_firstsprite, ppu\_oam\_lameselect, ppu\_oam\_tdaddr, ppu\_oam\_baseaddr, ppu\_oam\_addr, ppu\_oam\_firstsprite, ppu\_oam\_baseaddr, ppu_oam\_baseaddr, ppu_oam\_baseaddr, ppu_oam\_baseaddr, ppu_oam\_basead$ ppu\_bg\_mode, ppu\_mosaic\_size, ppu\_mosaic\_countdown, ppu\_bg\_scaddr[0], ppu\_bg\_scaddr[1], ppu\_bg\_scaddr ppu bg scaddr[3], ppu bg scsize[0], ppu bg scsize[1], ppu bg scsize[2], ppu bg scsize[3], ppu bg tdaddr[0], ppu bg tdaddr[1], ppu bg tdaddr[2], ppu bg tdaddr[3], ppu bg ofslatch, ppu m7 hofs, ppu m7 vofs, ppu bg hofs[0], ppu bg hofs[1], ppu bg hofs[2], ppu bg hofs[3], ppu bg vofs[0], ppu bg vofs[1], ppu bg vofs ppu bg vofs[3], ppu vram mapping, ppu vram incsize, ppu vram addr, ppu mode7 repeat, ppu m7 latch, ppu m7a, ppu m7b, ppu m7c, ppu m7d, ppu m7x, ppu m7y, ppu cgram addr, ppu cgram latchdata, ppu\_window1\_left, ppu\_window1\_right, ppu\_window2\_left, ppu\_window2\_right, ppu\_window\_mask[0], ppu\_window\_mask[1], ppu\_window\_mask[2], ppu\_window\_mask[3], ppu\_window\_mask[4], ppu\_window\_mask[5], ppu color mask, ppu colorsub mask, ppu color r, ppu color g, ppu color b, ppu color rgb, ppu scanlines, ppu hcounter, ppu vcounter, ppu vram readbuffer, ppu oam itemcount, ppu oam tilecount,
- on latch has no parameters
- CPU 0 is S-CPU, 1 is S-SMP.
- Cheats are supported for ROM, SRAM, WRAM, BSXFLASH, SLOT{A,B} {RAM,ROM}.
- Read/Write/Execute hooks are supported for ROM, SRAM, WRAM, BSXFLASH, SLOT{A,B} {RAM,ROM}.

## 20.2 gambatte core

- Registers are: wrambank, cyclecounter, pc, sp, hf1, hf2, zf, cf, a, b, c, d, e, f, h, l
- on latch is not supported
- CPU 0 is main CPU.
- Cheats are supported for ROM, SRAM and WRAM.
- Read/Write/Execute hooks are supported for ROM (read/execute only), SRAM and WRAM.
